

MediaVise SSD Compact Desktop SSD Crusher

Delivers 20 Tons of Crushing Force

The MediaVise Compact SSD Destroyer (MVC-SSD) physically destroys solid state drives (SSDs) and other solid-state media including cell phones, PDAs, circuit boards and memory cards. This completely automatic model is hands-free, requiring no special positioning or adapter to crush media. Exclusive crushing plates contain over 180 razor sharp, hardened steel teeth pierce the media from both sides, fracturing and crushing the brittle ceramic integrated circuit chips.

The MediaVise was specifically engineered to avoid the need for special alignment or adapters.

The MediaVise Difference:

- **Complete warping of the hard drive and all of its internals, including the storage platters.** Machines that only “fold” hard drives actually leave a lot of the surface area on a platter intact. The MediaVise’s patented crushing plates specifically target the entirety of the platters, leaving them completely warped and unrecoverable.
- **Maximum crushing force.** Many of the machines that “fold” or “punch” a hard drive deliver a relatively low amount of crushing force. The lower the crushing force, the more likely that the hard drive may not be completely warped. The MediaVise delivers 40,000 lbs. of force, leaving the drive completely mangled and destroyed.
- **Hassle free automated system.** This is the only system that does not require adapters or careful positioning of hard drives. Simply insert the media and press start. And the collection drawer means there is never a need to manually remove a drive.

Product Specifications

Media Accepted	2.5 & 3.5" HDDs cell phones DLT and LTO tapes
Maximum Media Size	5.75" x 4" x 1.25" (HxDxW)
Dimensions	25" x 19" x 12" (HxDxW)
Shipping Dimensions	30" x 22" x 22" (HxDxW)
Weight	185 lbs (excluded packing)
Power	120/220 & 240 Volts, +/- 10%, 60/50 Hz
Max Current	13Amps @ 120 Volts
Crush Cycle Time	30 Seconds

New: HEPA Filtration of Airborne Particulates Promotes Highest Standards of Worker and Environmental Safety:

In order to minimize health and safety hazards from inhalable airborne silica, heavy metals and fiberglass in the workplace, MediaVise products are now equipped with an MRV-8 on-board high-efficiency particulate air filtration system (HEPA).
